● United ... ● India ● Brazil ● The Uni... ● Russi... ● France ● Turkey ● Spain

## Most Effectted Location by Number Cases

In this chart we can see the number of COVID-19 cases and deaths over Months & Years in different regions.

- AFRO
- AMRO
- EMRO
- EURO
- SEARO
- WPRO

Highest points of Cases by Years

These visualizations provide a detailed analysis of COVID-19 case trends. The two line charts highlight **spikes** and **declines** in case numbers over time, allowing for clear tracking of the pandemic's progression. Additionally, two **Bar Chart** represents the highest and lowest case counts by year.

Lowest Points of Cases by Years

Spikes of cases over the time

Declines of cases over the time

These line charts depict the weekly trends of **COVID-19 Cases and Deaths**. One chart shows the **Average of cases over time**, while the other shows the **Average of Deaths over time**.

A **slider** with a **hierarchy of region and country** is included, allowing users to filter and view data for specific regions and countries. This feature enhances the chart's functionality, providing clear insights into the regional and country

**Hierarchy of Region & Country**

- ✓ ☐ AFRO
- ✓ ☐ AMRO
- ✓ ☐ EMRO
- ✓ ☐ EURO
- ✓ ☒ SEARO
- ✓ ☐ WPRO

In this Pie chart displays the count of COVID-19 cases by country. Each segment represents a different country, with the size corresponding to the number of cases. Here is a region-based slicer to enhancing the chart's functionality and providing clearer insights data. Here is also Monthly Filter Each Years.

SEARO

WPRO

This map chart visualizes **COVID-19 case** intensity using a different colour gradient. **Larger** shades represent higher case numbers, while **smaller** shades indicate lower case counts. It's a helpful tool for identifying hotspots and observing the spread of the virus across different **regions and countries**.

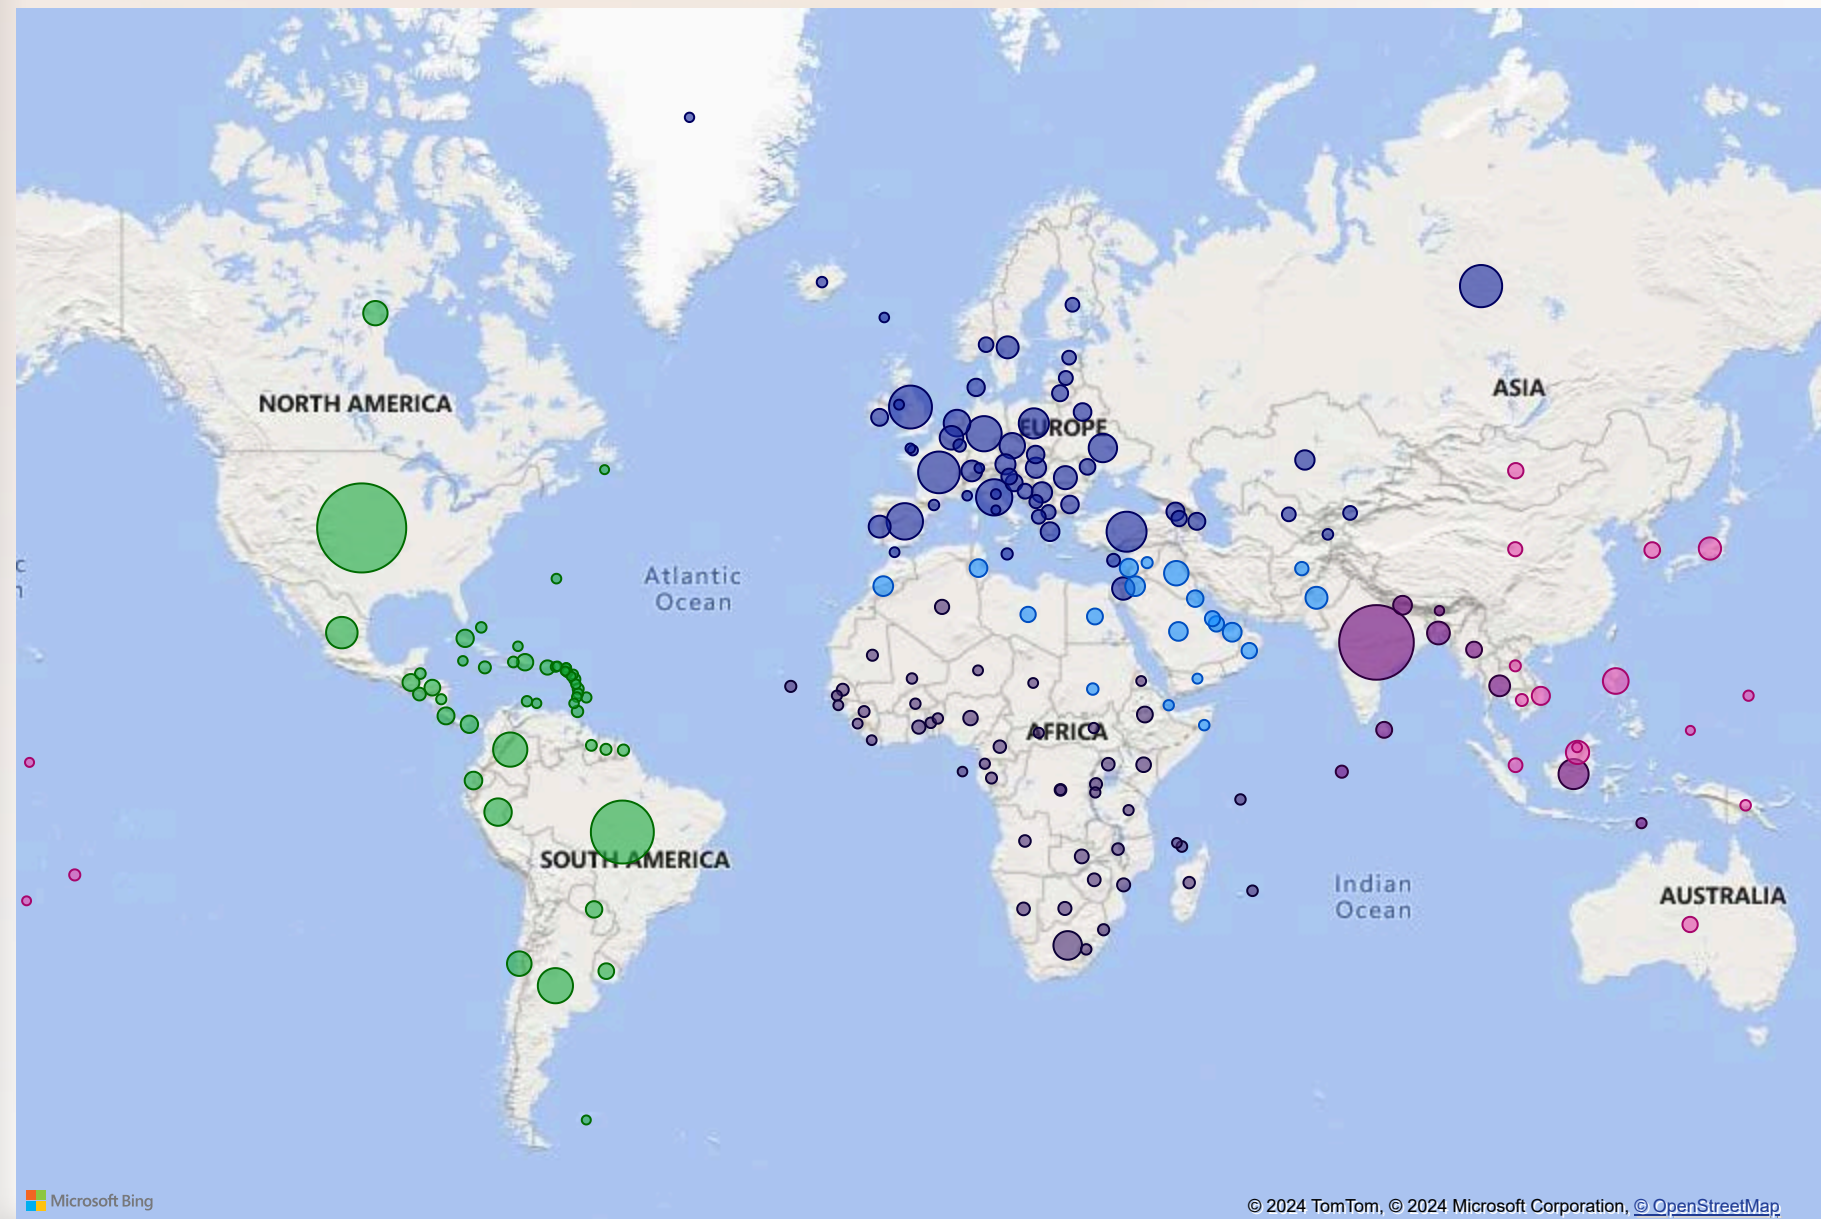

I have added here **slider** also. You can use it to see the cases of specific region and country.

#### Regions & Countries

- ✓ ☐ **AFRO**
- ✓ ☐ **AMRO**

### Intense Places of COVID-19 Cases

● AFRO ● AMRO ● EMRO ● EURO ● SEARO ● WPRO

### Cases & Deaths by Hierarchy of Region & Country

● Number of cases ● Number of Deaths

I have created the **(Hierarchy of Region & Country)** in **Data Pane** and use the Hierarchy in the above chart to show the Highest Number of **cases & Deaths** by **Region & Country**.

I already inserted the **Zoom Slider** in above chart, so you can use it to see the Death Count.

Here I have used the **Hierarchy** that I created in the previous Tab. Using this, I have shown the **Most Affected Region** through its **Maximum Number of Cases**. And I have added a **Slicer** with years & months option, so through this you can see which region is most affected at according the times. And In the **header icon** you can see the **Hierarchy button**, you can use it to see most affected **Country** in every region.
